

# Introduction to Node.js

Web Development Boot Camp  
Lesson 9.1

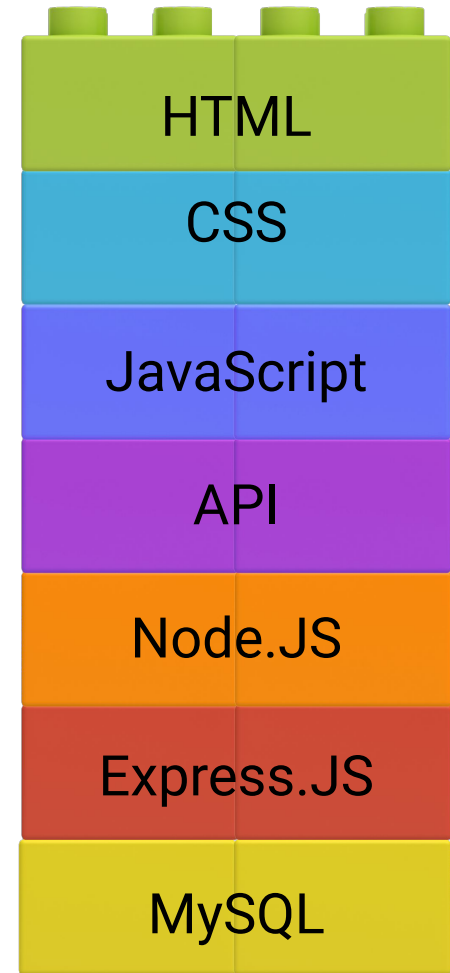

# **What Is Full-Stack Web Development?**

# Full-Stack Web Development

---

Full-stack web development encompasses the suite of tools required to build both the front and back ends of a web application.

# How Much of the Stack Do We Know?

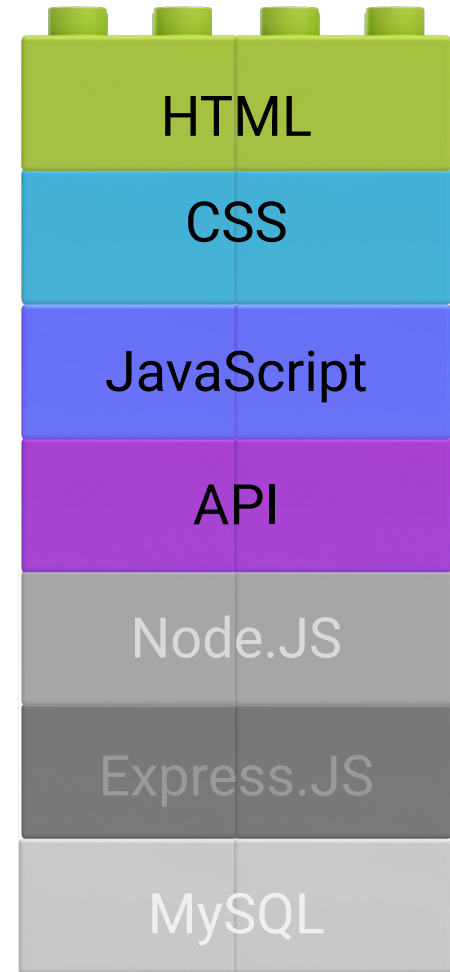

# Client-Side

---

- HTML
- CSS
- JavaScript
- APIs

[wikipedia.org/wiki/Client-side](https://wikipedia.org/wiki/Client-side)

# What Is a Client?

A **client** is a piece of computer hardware or software that accesses a service made available by a server. It can be a desktop computer, laptop, mobile device, and beyond!

# What Is GitHub Pages Doing?

# Awesome Project Deployed to GitHub Pages

---

GitHub Pages is *serving* content to clients.

# What Is a Server?

# Server Definition

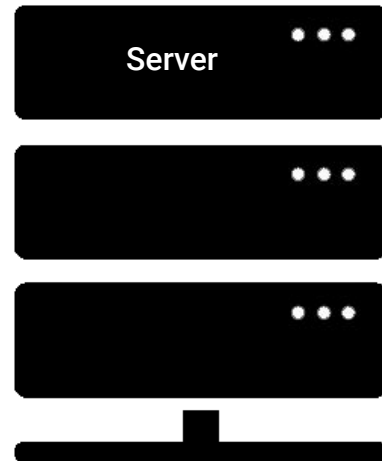

---

Depending on the context, a server is both the physical hardware *and* software that hears requests from users and returns something, such as an HTML or image file, or completes a process.

```
var http = require("http");
var PORT = 8080;

function handleRequest(request, response) {
  response.end("It Works!! Path Hit: " + request.url);
}

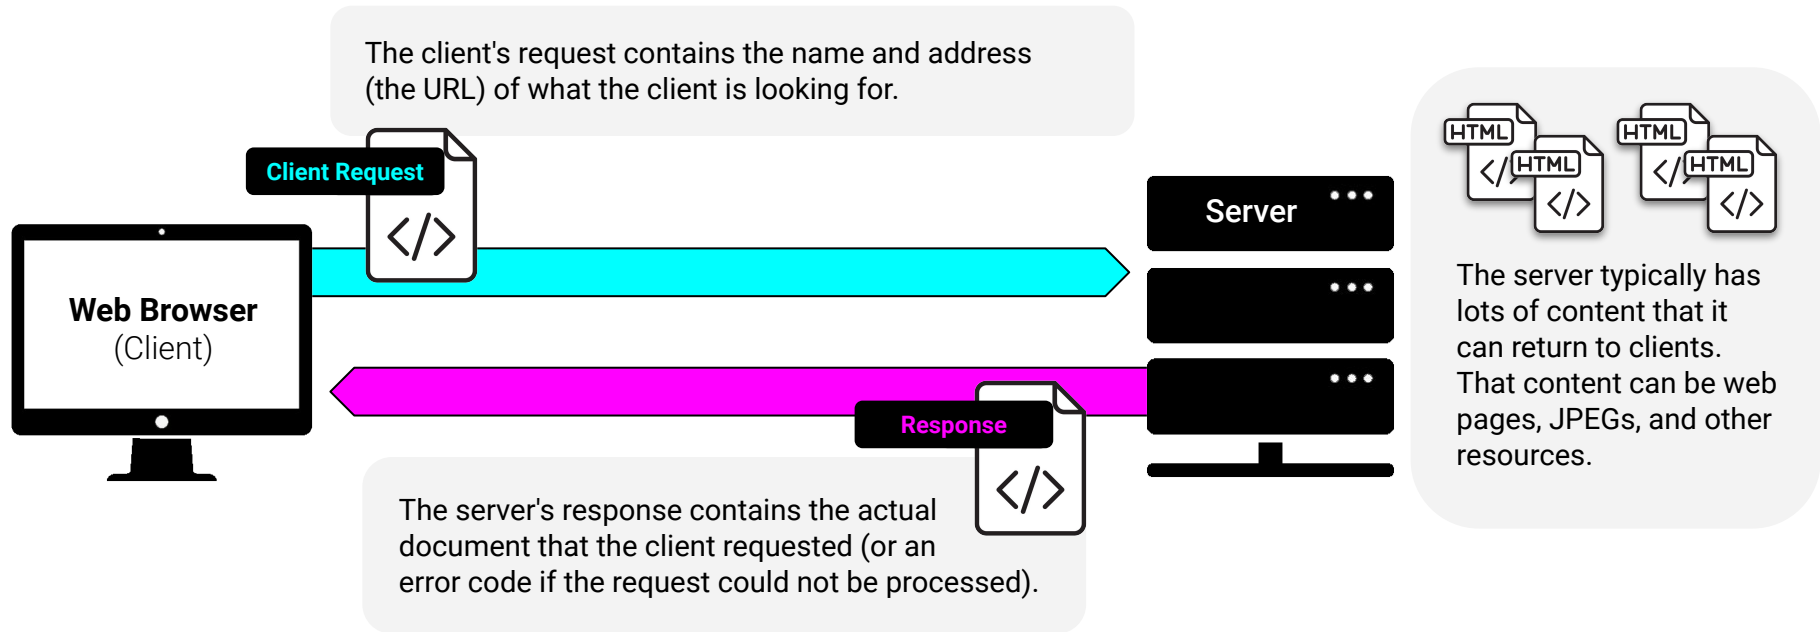

var server = http.createServer(handleRequest);
server.listen(PORT, function() {
  console.log("Server listening on: http://localhost:" + PORT);
});
```

# **What Is the Client-Server Model?**

# The Client-Server Model

In modern web applications, there is constant back-and-forth communication between the visuals displayed on the user's browser (the front end) and the data and logic stored on the server (the back end).

**Key Question:**  
So What Is ?

# Definition of NodeJS

---

**Node.js** is an open source, cross-platform JavaScript runtime environment designed to be run outside of the browser.

It is a general utility that can be used for a variety of purposes including asset compilation, scripting, monitoring, and **most notably as the basis for web servers.**
